SOLUTION

Encryption

Given the constant communications and exchanges taking place in the Cloud, information is exposed to risks linked to these functions. Stormshield Data Security for Cloud can encrypt information contained on the computer and in the Cloud.

The user is central to their data security

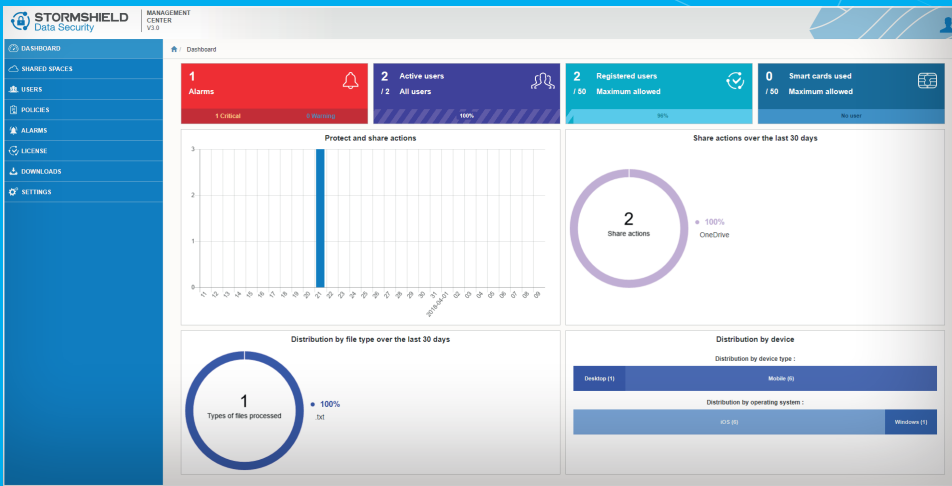

- Permission to access information
- Creation of secure collaborative spaces

The keys belong to the company

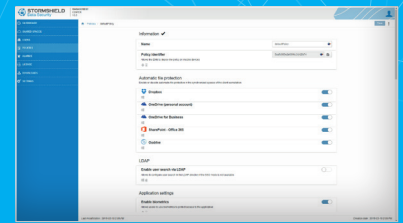

- End-to-end protection exclusively controlled by the company
- The file remains accessible regardless of where it is stored

Ease of use

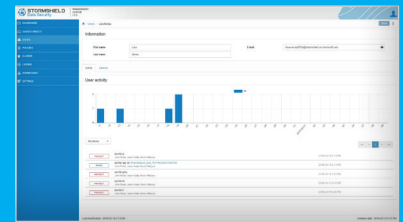

- Easy management of all security policies
- Encryption and decryption in a web browser
